

Were you watching when it began?

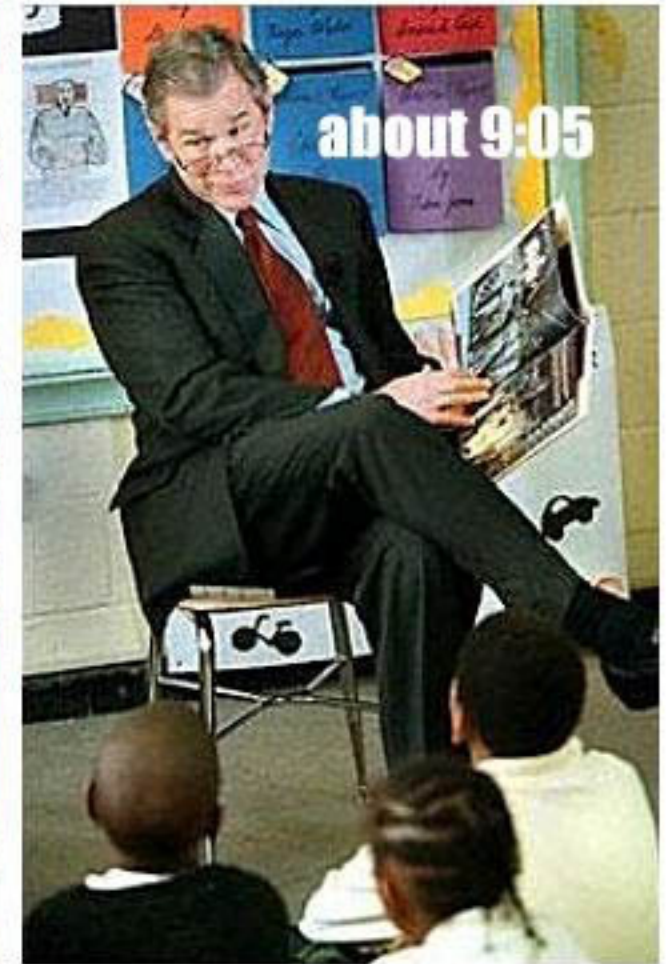

The only comparable event was when I saw Jack Ruby shoot Lee Harvey Oswald on live television in 1963...and again in endless replays till the horror was burned into our national psyche. This time, instead of a Sunday morning, it was a Tuesday morning much like any other workday. My wife was getting ready to go to work. Since my office was at home, I was propped up in bed reading the morning newspaper. It was 7:45 a.m., Central Time. The Today Show was on the TV in the background, and it suddenly drew my attention as Katie Couric paused and stammered something like "I'm told there is a breaking news story... a plane has crashed into the World Trade Center...let's go now to live coverage..." The live NBC view from Rockefeller Center looked somewhat like this CNN shot:

An airplane had crashed into upper floors of the north WTC tower. No fire... but lots of black smoke. In shock I watched rest of the day, little knowing that the event was the start of an improbable mystery far greater than the JFK assassination.

The improbable mystery begins

The improbable official presidential reaction

The first crash was at approximately 8:45 a.m. according to a CNN timeline. At that time President Bush was in his limo enroute to a Florida photo-op at Booker Elementary School. Sources say Bush was informed of the crash while in the limo. He himself later on two occasions said he SAW the first crash ON TELEVISION (in the limo?). He arrived at the school at 8:55 and began a photo-op reading a story to children about a pet goat. At 9:06 aide Andy Card whispered a message to him about the WTC. After a moment's pause with a bewildered look, Bush continued to read the goat story with the children until 9:16 a.m. Thirty minutes elapsed before he took any action. He went to another room in the school and read a prepared statement for the television cameras. He then left the school, lingering outside for more photo-ops with teachers and students.

The improbable official story of what happened

From the CNN timeline: "4 p.m.: CNN National Security Correspondent David Ensor reports that U.S officials say there are good indications that Saudi militant Osama bin Laden...is involved in the attacks, based on new and specific information developed since the attacks". Just like the Kennedy assassination...the "perpetrator" was named immediately! Only this time, he had 19 arab "suicide pilots" armed with small knives hijacking and crashing four giant jetliners! A preposterous "official story"!

8:45 a.m., plane hits north tower

Before the collapse, a temporary survivor stands in the gash made by the plane, giving lie to the official story of an inferno of great heat and intensity.

The 3-second fire that brought down WTC 1

French documentary photographers brothers Jules and Gedeon Naudet were filming a segment in New York on September 11 when a loud airplane noise overhead caused the cameraman to pan to follow the sound. The first two frames capture the plane as it impacts the North Tower. As an explosion occurs, third frame, the camera zooms in and catches a huge fireball, fourth frame. In the fifth frame, the fireball has diminished, and in the sixth frame, the fire is virtually out as smoke rises. In the seventh frame, the smoke and fire are about gone, showing the gaping slash in the north face of the tower. The entire sequence lasts just a few seconds, and the part showing the intense fire **LASTS ONLY 3 SECONDS**, and it is mostly outside the building. After that, all smoke came from the burning interior...yet the official story is that intense fire melted the building steel structure to cause the collapse!

9:03 a.m., plane hits south tower

Everyone in the world near a TV set saw an airplane hit the second WCT tower at 9:03 a.m. To help you understand 9-11, the next pages will show this crash from various views, because VIEWPOINT is crucial to understanding unexplained events. Note that as the plane at top right struck the south with a giant fireball, the view of the south tower from this point was blocked by the north tower!

9:03 a.m., plane hits south tower

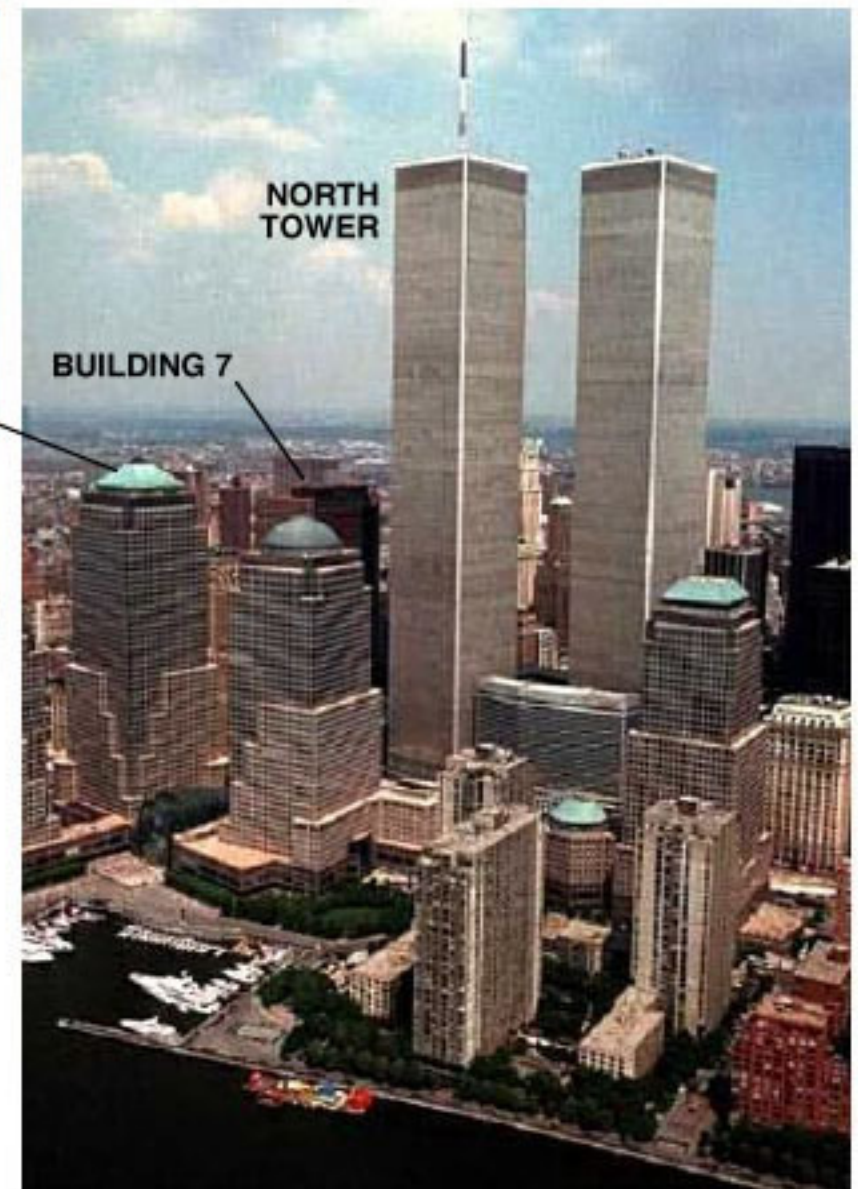

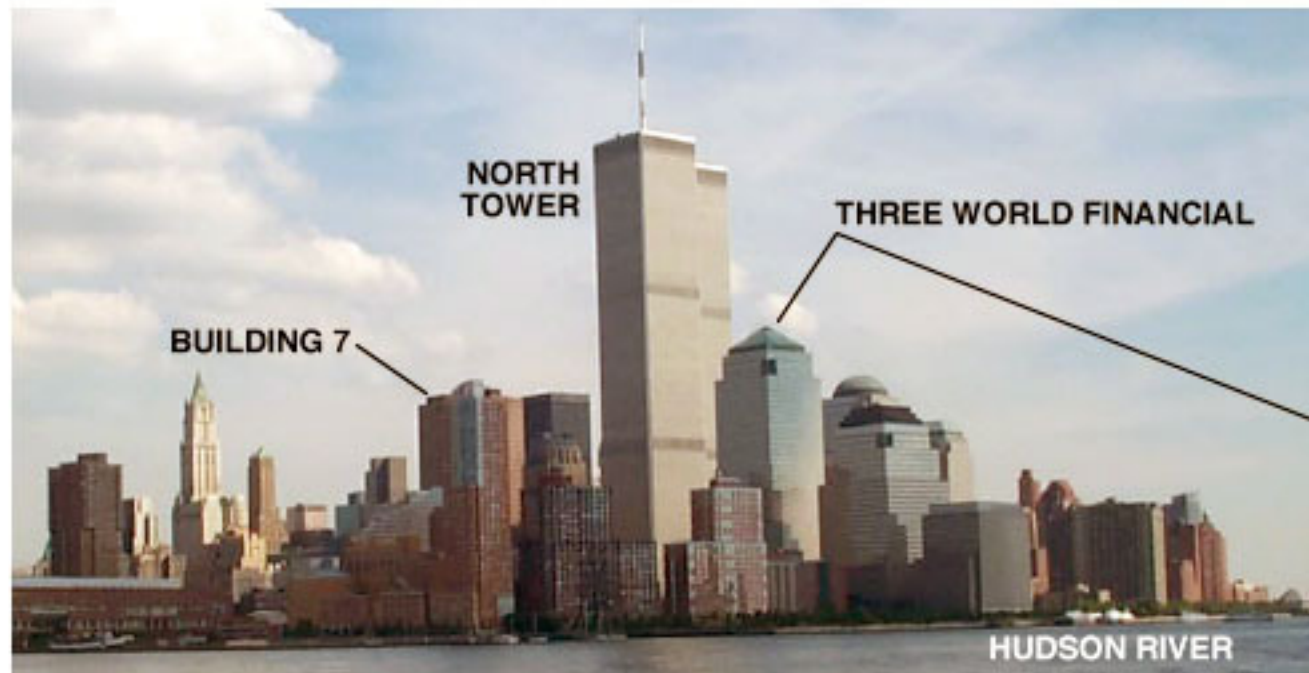

Virtually ALL the jet fuel burns in the air OUTSIDE of the building!

If the fuel mostly burned on the outside of the building, the official "towering inferno" story cannot be true!

**You gotta know
the territory...**

understanding the WTC

To understand the photos of 911, you must know all of the buildings, their locations, and the viewpoints of the various photos. "You gotta know the territory!" This page will help.

You gotta know
the territory . . .

understanding the WTC

Understanding the locations of these four buildings is crucial to understanding 911 photographs

It took weeks of studying maps and photos of lower Manhattan to memorize the maze of buildings there. To understand photographs of the events of 911, you must know the exact relationship of each of these buildings above to one another, especially that Building 6 is adjacent to Building 1, across Vesey Street from Building 7.

Mystery explosion of Building 6

The North Tower was hit at 8:45; the South Tower was hit at 9:03.

At 9:04 CNN televised a significant explosion between the North Tower and Building 7.

Since both towers are still standing, the explosive cloud was not caused by collapse of either WTC 1 or WTC 2.

Locating the explosion at street level ³

**Building 6
Pre-911 was
basically a
white building.**

This recently discovered photo of Building 6 (the "black" building) provides definitive proof that Building 6 exploded **BEFORE** either tower fell. Spectators stand looking upward at the burning North Tower (right). Building 7 is at upper left. Building 6 is blackened with missing windows and a gash on its top edge. It should be a **WHITE** building, same color as its ground floor, the pedestrian North Bridge at left, and the pre-911 photo at left. Note that firetrucks fill West Street. Other photos show firemen fighting the fire in Building 6 before the tower collapse. The official story is that Building 6 was destroyed when the North Tower fell on top of it. This photo proves that the official story is untrue. Building 6 exploded.

Biggert photo shows Building 6 damage

New York photographer Bill Biggert snapped this copyrighted photo of the fall of the south WTC tower just minutes before he lost his life photographing the collapse of the north tower seen at upper left. At right it is cropped and enlarged to show closeup the only known photo of WTC6 during the events of 911. The time is known very precisely...as the south tower collapsed, and before the north tower's collapse. Biggert's photo shows that Building 6 at that time had already suffered major trauma to the exterior, with soot above broken windows, drapes dangling outside and a yellow glow that may be fire inside. The damage is quite evident when compared to a pre-911 view of the building (inset at right). Computer contrast enhancement shows a dramatic difference from the pre-attack building photo, lending credibility to stories/photos of explosions in Building 6, even though it had not been hit in the attack, and contrary to the official story.

The Biggert photo looks south from West Street. The pre-911 photo of unknown provenance looks west from Vesey Street, and has been flipped horizontally for comparison.

Dust clouds distinctly are different events

9:04 a.m.

One minute after South Tower is hit, a large dust cloud erupts between WTC1 and WTC7.

Supporters of the "official story" claim that the 9:04 CNN explosion above is a dust cloud caused by the collapse of the South Tower (WTC2). But this is false, as examination of the two frames above shows. The 9:04 explosion cloud is seen to be at Vesey Street, between Building 7 (marked 7) and WTC1 (North Tower)...the location of WTC6. Previous pages have shown that at this time the South Tower is **STILL STANDING**, a block farther south beyond the North Tower. The second frame shows that WTC2 collapsed from the **TOP DOWN**, and no dust cloud reached ground level immediately. When the dust cloud did reach ground level, it spread out immediately all over lower Manhattan, as seen at right from the same viewpoint. It is impossible that the two frames are of the same event. They show **TWO** different events!

10:05 a.m.

One hour later, the South Tower begins collapse from top down. WTC2 (south) is far away from WTC7.

Locating the explosion cloud source

X marks the spot where the dust cloud came from ... BUILDING 6.

Eight-story Building 6 has a giant explosion crater "X" in the precise location that ground level photos show the dust cloud being ejected westward between buildings, rising upward from ground level !

WTC6 was at the corner of West and Vesey Streets, just north of WTC1 and just south of the NYC Telephone Building. WTC7, which also collapsed mysteriously, was just east of the telephone building, and across Vesey Street from Building Six. The NBC frame at upper left shows a massive dust cloud blasting westward BETWEEN WTC1 and WTC6, as shown by the yellow arrow above. A huge crater seen in the middle of the building (X) seems to be the point of origin of the dust cloud. The crater in the building was 8 stories deep.

Looking at the Building 6 crater

Aerial photos of Building 6 show a great crater in the middle of the building 8 stories tall.

Built of steel and concrete, Building Six was not hit by an airplane but developed a huge crater. It was evacuated but did not burn. Building One, the North Tower, did not collapse and fall on it. WTC1 was seen still standing at the time of ground level photos showing an explosion at the location of Building Six, so falling debris did not hit the building. Building Two was on the other side of Building One, which shielded it from any WTC2 debris. If not hit by plane, fire, or falling debris, WHAT CAUSED THE GIANT CRATER?

The center of Building Six, ALL 8 STORIES OF IT, is seen to be missing; not just collapsed, MISSING, BLOWN AWAY. If it had just collapsed, the collapsed portion would be evident within the crater. A massive explosion is the only answer.

Satellite imaging shows lingering heat

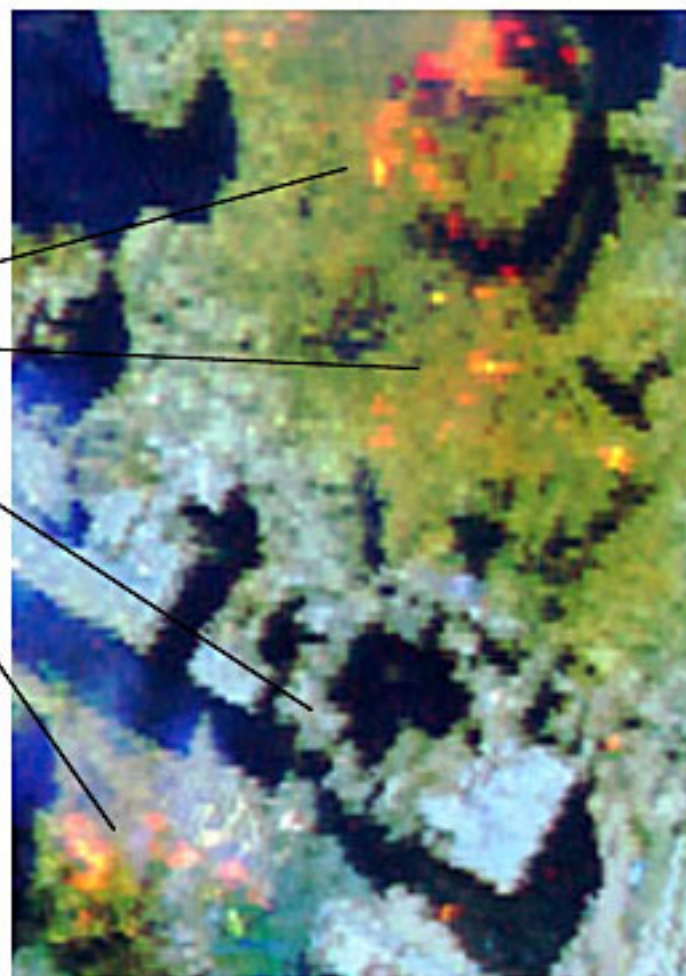

Thermal image

SOUTH TOWER

NORTH TOWER

BUILDING 6

BUILDING 7

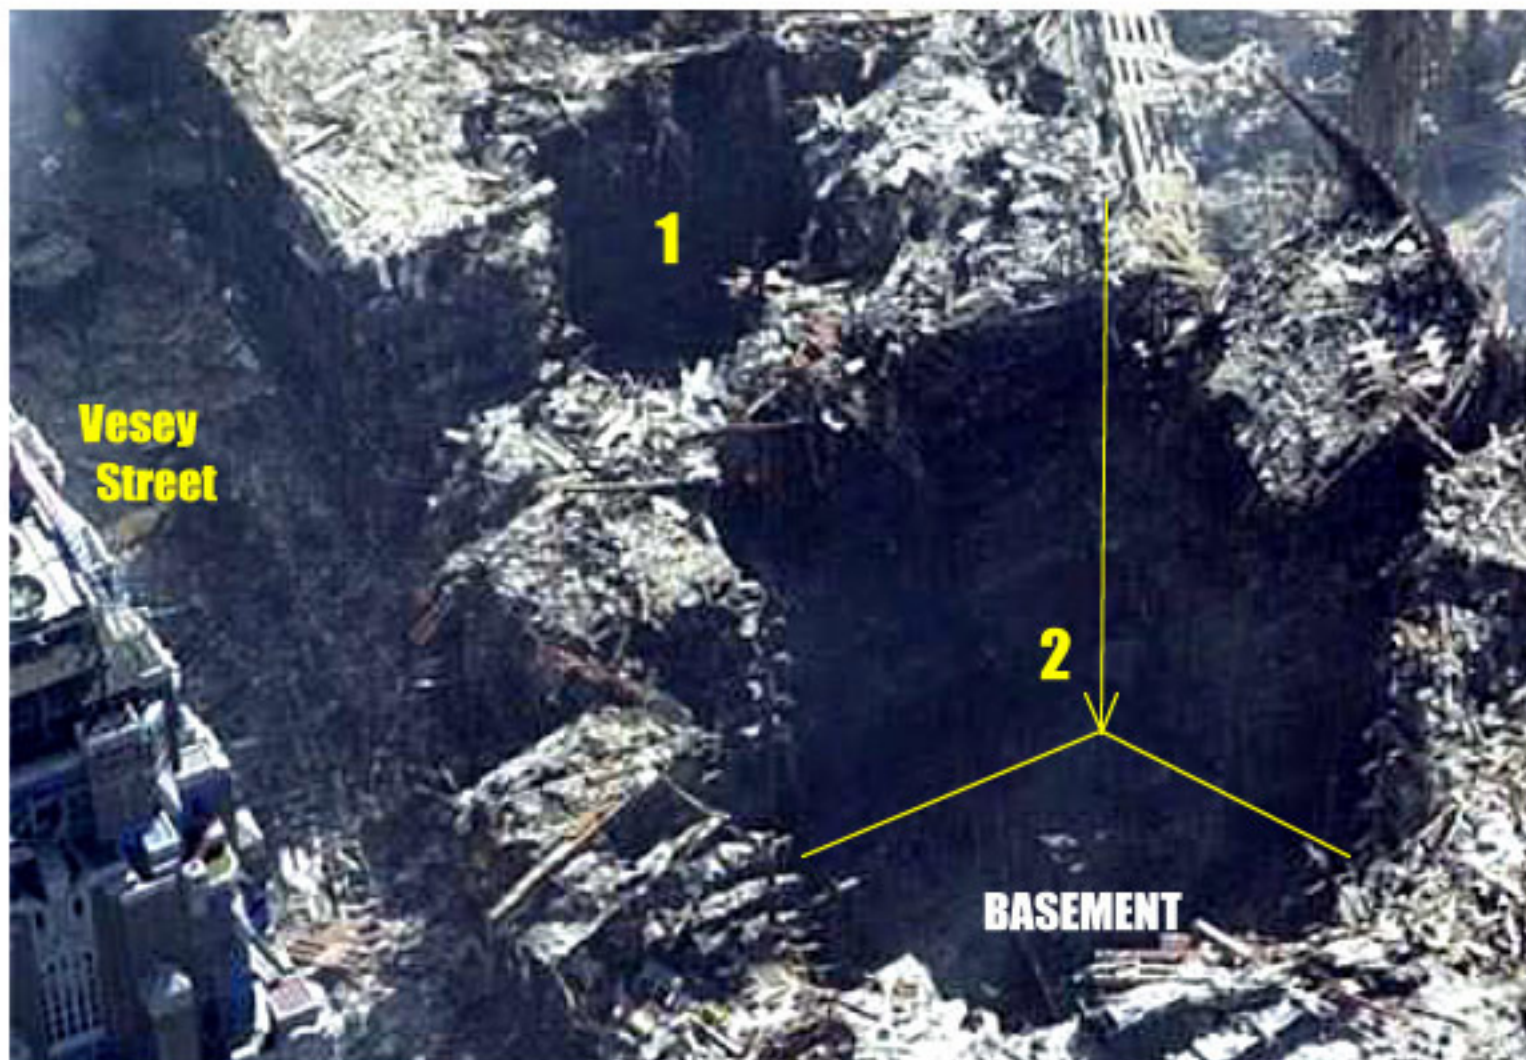

Taken on September 16, 2001 by NASA thermal imaging satellite and available on the US Geological Survey website is the image at left which shows residual heat under the locations of the fallen WTC buildings. The image shows that five days after the buildings fell (and for many days thereafter), molten steel in the basements with temperatures more than 2000 degrees persisted in the basements of WTC buildings 1, 2, and 7. Building 6, however, shows no signs of high temperatures in its basement, despite the immense hole blasted into the sub-basements, indicating an explosion without high residual heat in the fallen debris and basements.

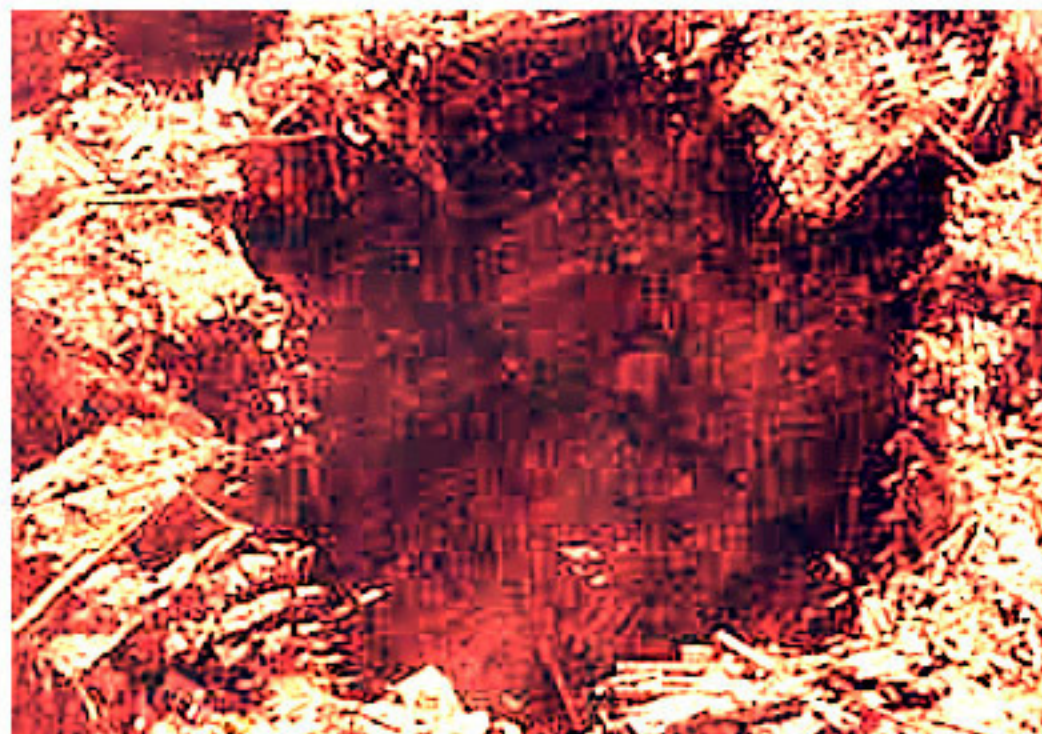

According to reports, temperatures of "molten steel" in the tower basements persisted for weeks. The melting point of structural steel is 2750 degrees Fahrenheit. No temperatures of WTC jet fuel fires could have reached that in the tower fires. Building 7 had NO uncontrollable fire, but still had residual heat. Building 6, which had a huge internal explosion, had NO residual heat.

TWO 10-story craters in 8-story building!

...and they're empty!

Computer enhancement shows TWO deep craters, and BOTH ARE EMPTY. Had Building Six merely collapsed, huge debris piles would be expected in the lower levels. Not only are there no piles of debris, the craters seem to go very far below the level of Vesey Street, appearing to expose a basement floor! The only possible way this could happen is that both craters were blasted from the bottom upward, expelling ALL debris up and outward...as seen in the video frames on the previous pages. It is believed that all WTC buildings had double basements, which means that from top to bottom, these two craters in the 8-story building are 10-stories deep! Conclusion: TWO explosions occurred, under cover of the distraction of the impact of the second aircraft...deep in the sub-basement of WTC6. Since the north tower had not collapsed, it is impossible that these craters were caused by falling debris. Since WTC6 was not hit by a plane nor falling debris and did not burn, what other explanation is possible but EXPLOSIONS?

Computer penetration of the dark pit shows the individual floors and a lack of debris in the basement. Eight floors of collapsed materials should have caused a stack of wreckage very high.

The controlled demolition of Building 7

Less than 1% of public knows that a THIRD WTC building collapsed

Ask any hundred people how many skyscrapers collapsed on 9-11 in the New York event, and 99% will say TWO, the twin towers. Ask the same people whether they know that WTC7, a 47-story building (left) also fell on 9-11 a few hours after the other two...at least three TV networks televised the collapse...and fewer than one person in a hundred will know what you are talking about! They will even dismiss your query as a "conspiracy theory"! Click on the links below and become informed!

At 5:20 p.m. slightly damaged Building Seven collapsed:

- > It had not been hit by an aircraft
- > It had not been hit by significant falling debris
- > It had not suffered any massive fire
- > It had suffered no known structural damage
- > It was far away from the buildings which fell earlier
- > It fell within its own footprint like an implosion
- > It fell at the rate of a gravity free fall, like an implosion
- > Photos show puffs of smoke like a planned implosion
- > Planned implosions take many weeks of preparation
- > The building owner told the NYFD to "pull it"
- > TV networks were notified it would be brought down
- > Tenants were almost all "sensitive" government offices
- > No steel skyscraper in history had collapsed like this
- > The official government report covered up the cause

CBS video

at 5:20 p.m.
1.4MB - mpeg

36-second video clip shows Building 7 from an elevated vantage point to the distant northeast. Dan Rather comments that it looks like a controlled demolition.

CBS video

at 5:20 p.m.
1.7MB - mpeg

9.6-second video shows the Building 7 collapse from a vantage point only about 1000 feet to the north. Note the smooth and fast vertical fall.

NBC video

at 5:20 p.m.
1.5MB - mpeg

9-second video shows the Building 7 collapse from a vantage point about a mile to the northeast on West Broadway. Smoke still lingers from earlier events.
